# Overview of Ganga - India

Ganga is a 2,525 km long river  
from the Gangotri Glacier and  
to the Bay of Bengal. It  
serves over 400 million people and is  
sacred, though it faces

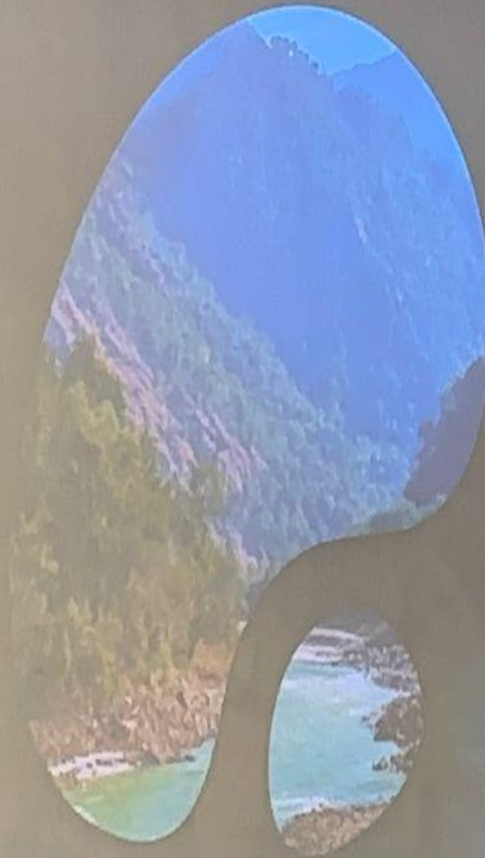

# What are RIVERS ?

A river is a natural flowing watercourse, usually freshwater, that moves from a source (like mountains) to a larger water body.

Rivers shape landscapes and support biodiversity.

They provide water essential for human life.
